Summary

iOS Developer experienced in building and scaling production-grade mobile applications with Swift, UIKit, and SwiftUI. Strong command of MVVM architecture, asynchronous programming, multithreading, and data persistence. Comfortable taking ownership of features end to end from architecture decisions to API integration, performance optimization, and refactoring legacy code. Focused on writing scalable, maintainable, and testable code. EU citizen with EMEA work authorization, open to remote and international opportunities.

Education

- **Bachelor of Science in Mathematics** *2015-22*

Izmir Institute of Technology,Izmir TR

Experience

- **iOS Developer** *Feb 2025 - May 2026*

VERO DIGITAL SOLUTIONS OOD Sofia - Remote

– Investigated and resolved high-priority production bugs, improving app stability and reducing crash rates.
– Developed and integrated new features based on product requirements and client needs.
– Implemented RESTful API integrations and handled asynchronous network operations.
– Managed local data persistence using CoreData and CoreStore.
– Improved multithreading flows to prevent race conditions and UI blocking.
– Refactored legacy code into more modular and maintainable MVVM-based structures.
– Worked on both Interface Builder and fully programmatic UI implementations.
– Swift, UIKit, SwiftUI, MVVM, CoreData, CoreStore, REST API, Multithreading (GCD), GitLab

- **Software Developer** *Oct 2022 - Dec 2024*

Car4Future Technologies

– Developed iOS app from scratch using SwiftUI and UIKit, with features including location-based station search, BLE charger control, and payment integration.
– Implemented CarPlay and Apple Watch extensions.
– Integrated Firebase for authentication, real-time data sync, and analytics.
– Managed CoreBluetooth for charger communication and optimized memory usage, resulting in 30% improved app performance.
– Firebase, UIKit, Mapbox, API, Lottie, BLE (Bluetooth Low Energy)

Projects

- **Car4Future:Smart City**

A Complete Environment for Electric Vehicle Users

– Developed the iOS application from scratch using SwiftUI and UIKit, implementing clean MVVM architecture.
– Authentication, Location Services, Payment System, BLE Management.
– Built and optimized CarPlay and Apple Watch extensions to extend the app's usability across the Apple ecosystem.
– Technologies: Swift, UIKit, SwiftUI, Firebase, Mapbox, REST API, CoreBluetooth, CarPlay, WatchKit

- **BauBuddy App - Vero Digital Solutions**

Implemented time tracking and work order management functionality within a field operations app for construction teams.

– Developed robust time tracking modules allowing users to record working time, travel time, and break time per work order.
– Integrated project and task assignment logic to associate tracked hours with specific jobs.
– Ensured offline data entry and synchronization upon network availability.
– Built interfaces for viewing detailed work hour summaries and filtering by project.
– Structured feature using MVVM and efficient CoreData-backed local persistence.
– Swift, UIKit/SwiftUI, MVVM, CoreData, RESTful sync logic, Offline-first data handling
